FIFTIETH ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE
DUBLIN HOSPITALS,

WITH

APPENDICES FOR THE YEAR 1907-8.

TO HIS EXCELLENCY THE RIGHT HON. JOHN
CAMPBELL, EARL OF ABERDEEN, G.C.M.G.,

Lord Lieutenant General and General Governor of Ireland.

35, Dawson Street,

31st July, 1908.

MAY IT PLEASE YOUR EXCELLENCY:

We, the Board of Superintendence of the City of Dublin Hospitals, have the honour to submit to Your Excellency this our Fiftieth Annual Report under Statute 19 & 20 Vict., cap. 110, passed on the 29th July, 1856, entitled Dublin Hospitals Regulation Act.

During the year ending 31st March, 1908, we have inspected all the Hospitals which receive grants from Parliament.

These are:—

1. Westmorland Lock Hospital.
2. Steevens's Hospital.
3. Meath Hospital and County Dublin Infirmary.
4. Cork-street Fever Hospital.
5. The House of Industry Hospitals, viz.:
 - a. Hardwicke Fever Hospital.
 - b. Whitworth Medical Hospital.
 - c. Richmond Surgical Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. The Royal Victoria Eye and Ear Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

On making these inspections we carefully observed and inquired into the state and condition of each institution to ascertain that the wards were clean and well ventilated, that every provision was made for the treatment, comfort, and welfare of the patients, and that the several buildings were kept in good repair and in a sanitary condition. We made inquiries respecting the current expenses of each hospital and the system of purchasing, storing cooking, and issuing supplies; we looked into the nursing arrangements, and into the means available in each hospital for the extinction of an outbreak of fire, and for the escape of the inmates in the event of such occurrence, and, in fact, into all such matters as might assist us in supervising these hospitals, and in reporting thereon in accordance with the provisions of the 18th section of the Act 19 and 20 Victoria, cap. 110.

We have visited every ward in the hospitals, and have interrogated those who appeared most helpless, to ascertain if proper care was bestowed on them.

In the appendix we set forth two sets of tables. One set tells of the work done, viz., the number and the nature of cases treated in each hospital during the year, the average number of beds occupied, the average time spent under treatment by each patient, the number of deaths. The other set has reference to the economic side of the question. Table No. 1 shows for each hospital its income and the sources thereof. No. 2 the average cost per bed for maintenance and for establishment and for both combined, but exclusive of buildings and furniture. No. 3 sets forth in detail the chief heads of expenditure. No. 4 the prices of each article supplied to each hospital per contract or otherwise. No. 5 gives the various dietaries in use in each hospital. There is also appended a form giving the names of the governors of each hospital and the number of their attendances during the year.

These returns show no marked change in relative expenditure from last and previous years. This is what one would expect. A reference to former reports will show that in every instance where there has appeared an expenditure at all unusual a full enquiry has been made, a consultation has taken place between this Board and the Board of the Hospital in question, with the result that the matter was either satisfactorily explained or that steps were taken to set it right. We are happy to be able to assure your Excellency that all the hospitals under our superintendence are managed in a thoroughly economic fashion.

We make this statement bearing in mind all the circumstances of each institution. For instance, a hospital antiquated in construction with a small number of beds and a large out-patient department must, other things being equal, show a larger cost per bed, and a larger expenditure under such headings as Medicines, than one with wards, &c., arranged for economy in management and carrying on its work under its own roof. We make it also on comparing not only the hospitals under our superintendence one with the other, but also with the accounts of which are set forth in the reports of the Dublin Hospital Sunday Fund, the London Hospital Sunday Fund, &c., &c.

With reference to the means available in each hospital for the extinction of an outbreak of fire and for the escape of the inmates in the event of such an occurrence, we have addressed a letter to each Board, and asked for a report. Some have, we think wisely, transferred the responsibility of making such a report to Captain Purcell of the Fire Brigade, and have, at the same time, asked him for suggestions for the correction of any shortcomings. This matter is, at present, being thoroughly looked into, and we hope in our next report to be able to assure your Excellency, on the authority of an expert, that each institution under our superintendence is as safe as its construction and its funds will permit.

We have also made an important change in the return shown on Table No. 1 in the appendix. This return is now arranged according to the nomenclature and classification of diseases drawn up by the Royal College of Physicians, London, and in future will be compiled from a registry of patients with a column not only for the name of each patient's disease but also for the number which that disease bears in the nomenclature in question. By using these numbers as a means of classification the diseases are compelled to fall into their proper order, and the result will be that all returns compiled in this manner will be comparable one with the other. The great gain of such a system is manifest. If a movement which is now on foot to get every hospital in Ireland to adopt one system of registration and classification succeeds, the compilation of a return for the whole of Ireland, showing the diseases treated in hospitals and the results, will be an easy matter. It should be mentioned that the returns published in this report are compiled from registries of the old form. If any inaccuracies are found, this should be borne in mind. The Boards and Registrars of the various hospitals have given every help towards forwarding the new system.

The great movement which Her Excellency the Countess of Aberdeen has set on foot to try and check the spread of Tuberculosis is one which, in a special way, concerns Dublin hospitals, and which has, of course, our fullest sympathy. In our Report of 1899, we made the following statement :—

“ With regard, however, to the admission of certain cases of pulmonary phthisis into general wards, we are of opinion that in the interest of other patients, and of the community at large, it would be desirable for the Local Government Board to provide special Sanatoria in suitable localities for the separate treatment of such patients. If this scheme could be carried out it would greatly relieve the pressure on the City Hospitals, and the expenditure involved would in the end prove an economy, and prevent the spread of tuberculous disease.

“ We venture also to suggest that the public should be informed by the authorities of the ways in which tuberculous diseases may be disseminated, and the means by which they may be obviated.

"We cannot forbear adding that it would be advisable that strict sanitary legislation should be enforced in regard to public conveyances, and also to churches, school-rooms, theatres, factories, markets, and dairy-yards, and other buildings where large assemblies of people are gathered together."

We are glad to see, thanks in great measure to the untiring energy of Her Excellency, that such Sanatoria are now in a fair way of being erected in many places.

We refer to this point to show that not only are Sanatoria a necessity, but that there is also necessity in every hospital for wards, for the isolation of suppurating wounds. In most cases, funds do not permit of such arrangements. It is often said "there are too many hospitals in Dublin." Such a remark, even when made carelessly, but tends to check the flow of charity towards hospitals. If it means that beds for the sick in Dublin hospitals are in excess of the demands, we can give it a direct contradiction. There is, on the contrary, wanted more and better accommodation. The hospitals of Dublin were placed from time to time by those who founded them, where they appeared to be most wanted. They have survived, and they give all the accommodation that their funds allow. There is not one of them with an income in excess of expenditure, or in which some useful addition or change does not wait on the pecuniary means to carry it out; there is not one of them which does not, from an economic and charitable point of view, give full value. It may be that some scheme of union would make for increased economy and efficiency; but one that would justify the large initial outlay manifestly necessary for the accomplishment of such a work has not yet been produced. In the meantime, through your Excellency, we wish to assure the Government and the charitable public, that any shortcomings that exist in any of the institutions under the superintendence of this Board, are due altogether to want of funds.

WESTMORLAND LOCK HOSPITAL.

We have nothing to add to what we have said in former reports about this institution. It is well conducted. The accounts show that the finances are in a satisfactory state, and the income, which practically consists of the Government grant, is economically expended. The halls, passages, wards, and basement are kept clean in every corner, and what scrubbing and lime-wash can do is done to give the old building a good appearance. The patients are well cared for and are kindly and skilfully treated. No exception can be taken to the bedding, food, cooking, and general management. All that the staff can do is done. During the year 552 cases were under treatment, of these five were sent to friends; 4 to fever or other hospitals; 23 to asylums; 8 to workhouse; 19 were discharged for insubordination; 8 were taken on in the hospital as wardmaids; 11 as laundry-maids; 53 left against medical advice.

STEEVENS'S HOSPITAL.

On inspection, we found order, cleanliness, and efficient arrangements for the care of the sick. The general sanitary condition, the cooking, the laundry, the nursery, &c., claimed our attention, and were all found satisfactory. The wards were in excellent order, the passages and basement clean, and the building on the whole, surprisingly bright, when one considers its age and construction. It must be borne in mind that this is the oldest hospital in Dublin, having been constructed in 1720, by Dr. Richard Steevens, for "such sick and wounded persons whose distempers are curable." Dr. Steevens, no doubt, wished to impress upon the public, a lesson that cannot be too often repeated, that a general hospital is not an almshouse nor a refuge for incurable cases, and that the qualification for admission is not a letter from a subscriber, but a distemper or wound that is curable. On going over the Accounts, the excellent and clear way in which they are set forth brought the following facts to our notice:—

1st. That although the Institution is not in debt, there are no funds for such pressing wants as the introduction of electric light, a better system of water supply, extensive repairs to the old fabric, &c.

2nd. That the expenditure on alcohol, to which we had to call attention in former Reports, has fallen from £93 in 1906-'07 to £81 in 1907-'08, nevertheless the rate is the highest on our list.

3rd. That the Nursing Home is so managed, that not only is the whole nursing of the hospital done free of expense, but there remains a large balance for the general benefit of the hospital. We give the following extract from the Annual Report:—

"In 1894 the sum received from fees and earnings of nurses to 31st March, amounted to £423 13 0

"In 1907, it amounted to £2,192 12 1
which shows that the income derived from this source has increased *five-fold* in the term mentioned.

"The estimated cost of nursing in the hospital in the year 1894 was £740 14s., while it has now risen to £1,395 2s. 6d.; and in spite of extra demand on the services of the nurses inside the hospital, the amount received from them in connection with private nursing and fees has so increased, that the whole nursing of the hospital has been defrayed free of expense, leaving a large balance for the general benefit of the hospital.

"The Governors cannot but regard this record as most satisfactory, and they believe it is largely due to the good management of the Superintendent of Nurses, and the energy displayed by her.

"The Home is now being worked quite independently, drawing all supplies directly from the contractors.

"This arrangement has worked excellently, both as regards economy and greater variety in the dietary; it also affords very valuable experience in housekeeping to the Sisters placed in charge of the Home."

As regards precautions against fire, the Registrar reports:—The hospital was completely inspected by Captain Purcell on 23rd April, and he reported to the Governors that he considered the means of escape good, and suggested a few small alterations to doors, &c., which are being carried out.

MEATH HOSPITAL AND COUNTY DUBLIN INFIRMARY.

The Joint Committee of the hospital in its annual report states that "after 154 years of existence it is now in a better position than ever before to continue its beneficent work, the only drawback being the want of sufficient funds." Our inspection enables us to bear out this statement. We found the hospital in excellent working order. We noted efficiency in every department. The new Home for the nursing staff and servants, to which we referred in our last report, was opened on the 7th May, 1907, by His Excellency the Earl of Aberdeen, K.T. The total cost of the building was £5,900.

There were in the wards of the hospital on the 1st April, 1907, 119 patients; 1,402 were admitted during the year, making 1,521. Of these 1,281 were discharged cured or relieved, 114 died (26 of whom were moribund when admitted and died within 24 hours), and 126 remained on the 31st March, 1908. The total number of days spent in hospital was 41,665. The average daily number of beds occupied was 118.84. The average number of days spent by each patient in hospital was 29.72, and the mortality was 6.43 on the total treated to a termination. There were also 6,375 accident cases treated as out-patients, and the dispensary cases numbered 9,195. There was, therefore, a total of 17,091 persons who received medical or surgical treatment during the year. The number of attendances at the out-patient department amounted to 25,671. This represents work which no sensible man would like to see curtailed. Let us now turn to the financial aspect of it.

At the commencement of the financial year there was a debit balance of £5,381 10s. 8d. The total expenditure was £6,908 1s. 4d., and the income, exclusive of a donation of £1,000, given for a special purpose, was £5,678 13s., thus showing a deficiency on the year of £1,229 8s. 4d., and leaving a balance against the hospital at the close of the year of £6,610 19s. We commend these figures to those who think that the hospital accommodation in Dublin is excessive. The fact is not a bed can be closed without entailing suffering on helpless people.

CORK-STREET FEVER HOSPITAL.

At our inspection we found nothing particular to note, which means that this hospital continues to do its all-important work—

that of curing the sick and isolating infectious cases—in a satisfactory manner. The more people realise how much the community gains by the notification of disease and by the immediate isolation of all affected by communicable ailments, the more will institutions like that under consideration be supported. Take, for instance, cerebro-spinal *alias* spotted fever. Surely if that very fatal disease, which caused such suffering in Belfast, has been able to make but little way here, it is in no small measure due to the fact noted in our last year's report that no febrile case from the city is ever refused admission into Cork-street Hospital. The good care taken of the patients also plays a part, for it has made it popular with the poor, and the detection and transference of dangerous cases are therefore comparatively easy. We found the general condition of the buildings as to state of repair and sanitation satisfactory. The wards were bright and airy. The baths, closets, urinals, and slop sinks were clean and working well.

The admirable laundry was in full swing, and the storage tanks referred to in last report are now in use, and clean water replaces that of the Poddle river. The method of cooking and the quality of the food was excellent.

The quarters of the nurses and servants were in good order, and there were no complaints.

THE HOUSE OF INDUSTRY HOSPITALS.

A methodical inspection of this hospital showed it to be working well in all its parts. We found order where order ought to be and disorder where in a busy institution regularity would indicate that things had been made ready for inspection. Our visits are unannounced and the order and dates of them are varied from year to year. Extreme regularity in a place shows either that it has been prepared for visitors or that there is not much going on. We inspected this institution at a busy time and found (as we have said) every department working smoothly. We shall not go into details. We have done so on many previous occasions. This is a great hospital worked in a most efficient manner.

THE COOMBE LYING-IN HOSPITAL.

We made a thorough inspection of this hospital. We found the hall and passages in good order; the wards clean and well ventilated; the bedding clean and good; the baths, closets, urinals and slop sinks clean and working well; the quality of the food good, the arrangements for cooking satisfactory; in a word, the general management called for nothing but praise. Still it is not an ideal institution. Much is called for to raise it to the level of 1908. But each item, that goes to the making of "the much," requires expenditure. Our inspection showed us that money it is that is wanting. For instance in 1859 (forty-eight years ago) this Board reported—"The waiting and dispensary rooms are low and dark, and as the attendance of extern patients in these

rooms is considerable, we informed the Governors that better provision is required in respect of them." At our inspection of the waiting room in 1908 we made the same remark to the "Master," who kindly accompanied, and we found him in full accord, but, said he, "Where's the money?" As we found that this institution had not been inspected by an expert as to the means of escape in case of fire we addressed a letter to the Governors on the subject and received the following reply, which we have answered by suggesting that the opinion of Captain Purcell of the Fire Brigade should be obtained:—

"As regards the means of escape in case of fire my Board consider that the Weir wing is amply provided with suitable exits, &c., but the older portions of the hospital are not as satisfactory in this respect as could be wished for.

"We have been, fortunately, immune to outbreaks of fire, largely due, no doubt, to a careful watch being maintained during the night as well as the day. Nevertheless the Governors contemplate the purchase of a new form of extinguisher to be placed in suitable positions throughout the buildings.

"Yours faithfully,

"H. W. A. HENRY, Registrar."

ROTUNDA LYING-IN HOSPITAL.

We examined the several departments of this hospital, and found all in excellent working order. We found ourselves satisfied about everything, except as to the means of escape in case of fire in certain parts of the building. The Governors, we are informed, "have recently provided appliances in different parts of the hospital buildings for the escape from and the extinguishing of possible fires. Nevertheless we think that the opinion of Captain Purcell of the Fire Brigade, or of some other expert, should be obtained if only to satisfy the minds of all concerned, and we have written to the Governors to that effect.

As to changes that have occurred during the year, they are set forth in the following extract from the Master's report, which we adopt:—

"The public opening of our new wing by Her Excellency The Countess of Aberdeen and its full occupation is the most important event to chronicle in our present report.

"The hospital is now well equipped to meet the requirements of modern gynaecological and obstetrical practice. It contains 85 obstetrical and 36 gynaecological beds, together with 64 cots for infants. This accommodation has proved ample, and it has no longer become necessary to place patients on mattresses laid on the floor, a means formerly resorted to as the only alternative to refusing them admission. Should further accommodation be required in the future, we have still space available to permit the number of our maternity beds to be increased to well over 100.

"It is more than likely that this increase will be found necessary, for our patients are every year becoming more educated to the benefits derived from a prolonged stay in hospital. A few years ago numbers insisted on leaving the house as early as the fifth day, those who annually do so now could be counted on the fingers of one hand, whilst many at present ask for permission to stay longer than eight days, and their request is invariably granted. If this custom becomes more general it will compel us to increase our beds.

"We have brought our nursing staff up to its full strength; but we are careful not to train nurses in excess of those absolutely required, nor are they called upon to perform any duty which is not directly connected with the patients' needs.

"The changes through which our country has passed, and is passing, have made it more than ever necessary to economise our resources, and it is most satisfactory to find that the enlargement of the hospital has not added excessively to its administrative expenditure. The alterations necessitated in the boiler-house in consequence of this enlargement have enabled us to heat the new wing and lady-students' quarters with steam radiators, to double the supply of hot water to the old building, to feed eight additional baths, to operate the large steam sterilizer, and to destroy the hospital refuse with a consumption of fuel less than that which was consumed in the old furnace, now replaced. The new wing is lighted throughout with electricity, and we have availed ourselves of the opportunity offered to install electric light in our theatres, and in addition to employ it for the heating of our cauteries and the illumination of cystoscope lamps."

THE ROYAL VICTORIA EYE AND EAR HOSPITAL

A very thorough inspection of this hospital enables us to say that it is working well in every department. At the General Meeting, held 26th March, 1908, one speaker, a man of experience, remarked, in reference to the outlay on the hospital:—"We feel we have given value for the money. This is a really fine institution. I can speak without fear of contradiction when I say that there is no hospital of the kind in the British Islands better equipped and conducted than this is, though it is yet unfinished."

In this estimation of it we agree, and we hope that the day is not distant when the word unfinished will no longer apply to it. It should be remembered that the percentage of blind people in Ireland is one-fifth greater than in England and Wales and Scotland, and this although there has been a considerable improvement of late. We are glad to see that the Council intends as a first step to the completion of their architectural plans to erect, as soon as funds permit, a detached building to accommodate and to facilitate the treatment of extern patients. We are told that the plans have been prepared and approved, and that

tenders have been sent in, and that now it only requires money in order to be able to commence this work and to bring it to completion. Out patients in a special way claim one's sympathy. They are as a rule persons who, though disabled by chronic ailments, try to hang on to their work. To attend to them quickly and efficiently and let them go their way is a great charity. We hope, therefore, to soon see this building completed and in working order—a clear gain to the sufferers who paid 41,167 visits last year, and an object lesson to other institutions in what an out-patient department should be.

THE ROYAL HOSPITAL FOR INCURABLES.

In our report last year we remarked that our feelings after our inspection of this institution were not those of depression, but rather of that joyful thankfulness which arises when one sees a most difficult situation being dealt with in the best possible way. Again, this year we found that it enlisted our sympathies in a very special manner. We found everything well done—efficiency in every department—but what we one and all noted chiefly was something impossible to locate, which makes the place, to use the words applied to it by Lady Aberdeen, “a home-like house.”

Amongst changes since our last visit the chief has been a re-modelling of the Laundry. A new steam engine, washing and ironing machines, a hydro-extractor and steam heater have been introduced. No one could help being struck with how simply and efficiently each of these appliances works and with the amount of labour saved by them. In our last report we suggested to the Governors that the dressings soiled by the sick should be burned on the premises rather than sent away to be destroyed at the works of the Pembroke Township. This suggestion has been adopted.

As regards means of escape in case of fire, we are informed that all the premises have been inspected by Captain Purcell, and that his suggestions have been attended to.

We have the honour to be

Your Excellency's obedient, faithful servants,

FRANCIS W. BRADY, BART., *Chairman.*

Cooked Meat, Beef or Mutton, roasted or boiled, alternately; $\frac{1}{2}$ lb. Potatoes; $\frac{1}{2}$ pint Broth; or, $\frac{1}{2}$ pint Broth, with Meat, Rice Pudding, and Bread, 4 oz.; or, 6 oz. White Fish, instead of Broth.	Bread, 6 oz.; Tea, 1 pint; or, Bread, 4 oz., and 1 pint of Gruel; or, 1 pint Stirabout and $\frac{1}{2}$ pint Milk.
Low Diet,	Bread, 4 oz.; Milk, Tea, or Gruel, 1 pint; Butter, $\frac{1}{2}$ oz.	Bread, 4 oz.; Milk or Beef Tea, 1 pint.	Same as Breakfast.
Fever Diet,	Milk, Whey, Beef	Tea, Chicken Broth, Stimulants,	Bread, Arrowroot, Sago, or Corn Flour, as ordered.

MATERNITY HOSPITAL.

Low Diet.—2 pints hot Milk, 1 pint Gruel, 1 pint Broth. Tea, Bread, as sufficiency. Beef
Tea, Eggs, or other extras when ordered.

Full Diet.—6 oz. meat in place of Broth.

For Beef Tea we allow $\frac{1}{2}$ lb. beef to 1 pint water. For Broth—Stock with barley, oatmeal,
Horns, &c. For Gruel—To 7 pints Milk, 1 lb. Oatmeal, 4 oz. Sugar, and a little Ginger. Tea,
1 oz. for 6 patients.

Each patient on admission shall be placed on Low Diet, until the proper Diet is ordered,
or by the Physicians. No extra shall be given, unless on the order of the Master or Assistant,
nor re-issued unless the order therefor is initiated on the Diet Sheet by the Physician at his
regular visit.

COOMBE LYING-IN HOSPITAL.

No Extras allowed unless ordered each day and initiated by one of the Medical Officers

Appendix

No. 7.

Dietaries

Diets.	Breakfast.	Dinner and Luncheon.	Supper.
No. 1.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, $\frac{1}{2}$ pint. Ment, $\frac{1}{2}$ lb.; bread, 4 oz.; ox head soup, 1 pint.	Tea, 1 pint; bread, 4 oz. Supper—Milk, $\frac{1}{2}$ pint, or gruel, 1 pint.
No. 2.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, $\frac{1}{2}$ pint. Ox-head soup, 1 pint; bread, 4 oz.; whey, 1 pint, 4 o'clock.	Tea, 1 pint; bread, 4 oz. Supper—Gruel, 1 pint, contains $\frac{1}{2}$ pint milk.
No. 3.	Tea, 1 pint. Bread, 4 oz.	Luncheon—Milk, 1 pint. Special beef tea, 1 pint; whey or milk, 1 pint, 4 o'clock.	Tea, 1 pint; bread, 4 oz. Supper—Milk, 1 pint.
No. 4.	SLOP DIET IN 24 HOURS:—		
		Special beef tea,	2 pints.
		Milk,	6 pints.

Breakfast, 7.30 A.M.; Luncheon, 11 A.M.; Dinner, 1 P.M.; Tea, 5 and 6 P.M.; Supper, 8.30 P.M.

EXTRAS AND STIMULANTS AS ORDERED IN ALL DIETS.

Tea, $\frac{1}{2}$ lb.; sugar, 1 lb.; milk, 2 pints—supplies 10 patients for 24 hours.

Bread, 2 lbs. loaf—6 lbs. supplies 8 patients for 24 hours.

Ox-head broth— $\frac{1}{2}$ ox-head for broth, thickened with barley and dried vegetables, for 10 patients.Special beef tea—gravy beef, $\frac{1}{2}$ lb. to 1 pint.Whey—milk, $\frac{1}{2}$ pint, and buttermilk, $\frac{1}{2}$ pint, to make 1 pint.Gruel—oatmeal, 1 oz., to milk, $\frac{1}{2}$ pint, for 1 pint.

ROYAL VICTORIA EYE AND EAR HOSPITAL.

Breakfast.	Dinner.	Supper.
Bread and Butter, 8 oz.	On Sunday and Wednesday—Roast mutton, with vegetables (turnips or cabbage), and potatoes.	Bread and butter.
Tea, with Milk and Sugar, 1 pint.	On Monday and Saturday—Roast beef or stewed beef occasionally with soup, vegetables, and potatoes.	Tea, with milk and sugar.
	On Tuesday—Boiled bacon and cabbage and potatoes.	
	On Thursday—Roast beef, with potatoes and turnips.	
	On Friday—Fish and potatoes.	
	Bread each day as required: many of the patients do not care to take any.	

Breakfast at 8 o'clock, A.M.; dinner at 1.30 o'clock, P.M.; supper at 5.30 o'clock, P.M.

Eggs and extra Milk, Beef Tea, &c., supplied when necessary, if the patient is debilitated or too old or too young for the ordinary diet.

The system of preparing a set diet for each patient was abandoned some years ago, as it was found to result in a good deal of waste. Now each patient gets as much as he or she cares to eat and there is practically no waste at meals.

Appendix to Annual Report, &c.

No. 16516.

DUBLIN CASTLE,

7th August, 1908.

SIR,

I have to acknowledge the receipt of your letter of the 6th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Fiftieth Annual Report of the Board of Superintendence of the Dublin Hospitals, with Appendices, for the year 1907-1908.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY

The Secretary,

Board of Superintendence of the

Dublin Hospitals,

35, Dawson-street,

Dublin.
